

Proceedings of the Workshop on the Human Dimensions of Global Change: A Review of Selected Papers

The Workshop on the Human Dimensions of Global Change was held in Washington, D.C., from July 10-12, 1990. The workshop was sponsored by the National Science Foundation, the Environmental Protection Agency, and the National Aeronautics and Space Administration. The purpose of the workshop was to bring together researchers from a variety of disciplines to discuss the human dimensions of global change. The workshop was attended by over 100 researchers from the United States and abroad.

The workshop was divided into five working groups:

The Future of Atmospheric Boundary Layer Observing, Understanding, and Modeling: Proceedings of a Workshop by Alexandra Christo

- Human Population and Global Change

- Human Health and Global Change
- Human Welfare and Global Change
- Human Behavior and Global Change
- Human Values and Global Change

Each working group met for two days to discuss the state of the science in their respective areas. The working groups then presented their findings to the full workshop. The workshop concluded with a plenary session in which the participants discussed the implications of the workshop findings for research, policy, and education.

The workshop proceedings have been published in a special issue of the journal *Global Environmental Change*. The proceedings include papers from each of the working groups, as well as a synthesis paper by the workshop chairs. The synthesis paper provides an overview of the workshop findings and identifies key research needs.

The workshop findings have important implications for research, policy, and education. The findings highlight the need for more research on the human dimensions of global change. The findings also suggest that policies to address global change must take into account the human dimensions of the problem. Finally, the findings underscore the importance of educating the public about the human dimensions of global change.

The Workshop on the Human Dimensions of Global Change was a landmark event in the field of global change research. The workshop brought together researchers from a variety of disciplines to discuss the

human dimensions of global change. The workshop findings have important implications for research, policy, and education.
