Parents can play a vital role in supporting their child's development during these early years. By providing a loving and stimulating environment, parents can help their child reach their full potential.

Cognitive Development

Cognitive development refers to the development of a child's thinking skills. During the first seven years of life, children will learn to:

- Solve problems
- Make decisions
- Use language
- Understand concepts
- Remember information

Parents can support their child's cognitive development by:

- Reading to them
- Talking to them
- Playing games with them
- Providing them with opportunities to explore

Social and Emotional Development

Social and emotional development refers to the development of a child's ability to interact with others and understand their own feelings. During the first seven years of life, children will learn to:

- Make friends
- Share
- Cooperate
- Express their feelings

- Regulate their behavior

Parents can support their child's social and emotional development by:

- Spending time with them
- Listening to them
- Encouraging them to interact with others
- Setting limits and expectations
- Providing them with opportunities to practice their social skills

Physical Development

Physical development refers to the development of a child's body and motor skills. During the first seven years of life, children will learn to:

- Walk
- Run
- Jump
- Catch
- Throw

Parents can support their child's physical development by:

- Providing them with opportunities to play and exercise
- Encouraging them to be active
- Providing them with healthy foods

- Getting them regular medical checkups

The first seven years of life are a critical period of development for children. By providing a loving and stimulating environment, parents can help their child reach their full potential.
